

WHAT IS CLAIMED IS:

5

1. A cabled connector with a cable  
extending from a connector cover, the cabled  
connector comprising:

10 a cable guide being an independent member  
from said connector cover, having a pipe form  
accommodating said cable therethrough, and  
enveloping and guiding a part of said cable leading  
out from said connector cover,

15 wherein said cable guide is attached  
detachably to said connector cover.

20

2. The cabled connector as claimed in  
claim 1, wherein said connector cover comprises a  
first half cover and a second half cover combined  
with each other,

25 said cable guide comprises two cable half  
guides combined with each other, each of the cable  
half guides having a semicircular cross section, and

30 said two cable half guides are coupled by  
being engaged with each other at end parts thereof,  
and are coupled with each other and attached  
detachably to said connector cover by being held  
between said first half cover and said second half  
cover at base parts of the two cable half guides.

35

3. The cabled connector as claimed in

claim 1, wherein a part attaching said cable guide to said connector cover is arranged symmetrical about a cable exit of said connector cover, and

5       said cable guide is capable of being attached to said connector cover with an end part of said cable guide being turned in a different direction.

10

4. The cabled connector as claimed in claim 1, wherein said connector cover comprises a first half cover and a second half cover combined with each other,

15       said first half cover and said second half cover include respective wall portions confronting each other when said first half cover and said second half cover are combined, and

20       a portion of said cable guide at a base part thereof is engaged with receding portions formed limitedly within respective ranges of widths of said wall portions.

25

5. A cable guide attached detachably to a connector cover included in a cabled connector with a cable extending from said connector cover formed of a first half cover and a second half cover combined with each other, the cable guide comprising:

30       a first cable half guide and a second cable half guide combined with each other, each of the first cable half guide and the second cable half guide having a semicircular cross section, so as to

form a pipe form accommodating said cable  
therethrough,

          wherein said first cable half guide and  
said second cable half guide includes respective  
5 portions so formed as to be coupled by being engaged  
with each other at end parts of the first cable half  
guide and the second cable half guide, and includes  
respective portions so formed as to be held between  
said first half cover and said second half cover at  
10 base parts of the first cable half guide and the  
second cable half guide.

15

6. A connector cover comprising:

          a first half cover and a second half cover  
combined with each other so that a cable guide is  
attached detachably to said connector cover,

20           wherein said first half cover and said  
second half cover include respective wall portions  
confronting each other when said first half cover  
and said second half cover are combined, and

          a portion of said cable guide at a base  
25 part thereof is engaged with receding portions  
formed limitedly within respective ranges of widths  
of said wall portions.
